

BIR 2015

14th International Conference on Perspectives in Business Informatics Research

26-28 August 2015, Tartu, Estonia

<http://bir2015.cs.ut.ee>

CALL for WORKSHOP PAPERS

BP-Cloud'15: Workshop on Business Processes in the Cloud

Organizers: *Mario Luca Bernardi, Marta Cimitile, and Fabrizio Maria Maggi*

- Cloud Computing performs on-demand delivery of platforms, infrastructures or software as a service.
- Design-time cloud-based services can increase the collaboration between geographically dispersed organizations and teams.
- Cloud Computing offers extended shared data recording and process centred cloud systems useful to extract information about the processes.

The workshop is open to researchers and practitioners interested in the development of techniques with Cloud Computing

ILOG'15: 8th Workshop on Information Logistics and Knowledge Supply

Organizers: *Kurt Sandkuhl and Ulf Seigerroth*

- Knowledge-intensive industry and service sectors are dependent on accurate and timely information supply for efficient and high quality processes and services.
- Intelligent information supply is an important issue that is characterized by just-in-time, demand-oriented and context-sensitive information.
- Cyber-physical systems and big data applications pose new challenges to information logistics solutions.

The workshop aims at bringing together people who have strong interest in information systems, information logistics, enterprise solutions and knowledge supply

Important Dates

- Paper submission: May 25th 2015
- Notification of acceptance: June 29th 2015
- Camera ready submission: July 20th 2015
- Workshops: August 26th 2015

SCBP'15: Workshop on Security and Compliance in Business Processes

Organizers: *Naved Ahmed and Raimundas Matulevičius*

- Security and privacy incidents caused by erroneous workflow specifications are regrettably common in Business Processes and new techniques are needed to reduce them.
- If business process management and security are addressed together, it is possible to develop trustworthy and security-compliant business processes.

The workshop seeks to bring together researchers and practitioners interested in the management of secure and compliant business processes.

WOIS'15: 3rd Workshop on Ontologies and Information Systems

Organizers: *Birger Lantow and He Tan*

- In conjunction with evolving semantic technologies for ontology engineering, representation and query, new ways open up for ontologies and information systems integration, combination and use.
- Ontologies provide means to structure, store and access generic information systems content.
- Ontologies may help to choose appropriate processes, algorithms, rules, and software components depending on the requirements.

The workshop aims at bringing together people who have strong interest in the use of ontologies in the context of enterprise information systems.

Workshop Chair

Fabrizio Maggi, *University of Tartu, Estonia*
